CSE471 : System Analysis and Design
Lab Assignment on API Postman Collection

Project Title : Project Title Here
Group Number : ##
Backend Framework :

Submitted by : Your name
Student ID : ######
Section: ##

Date :

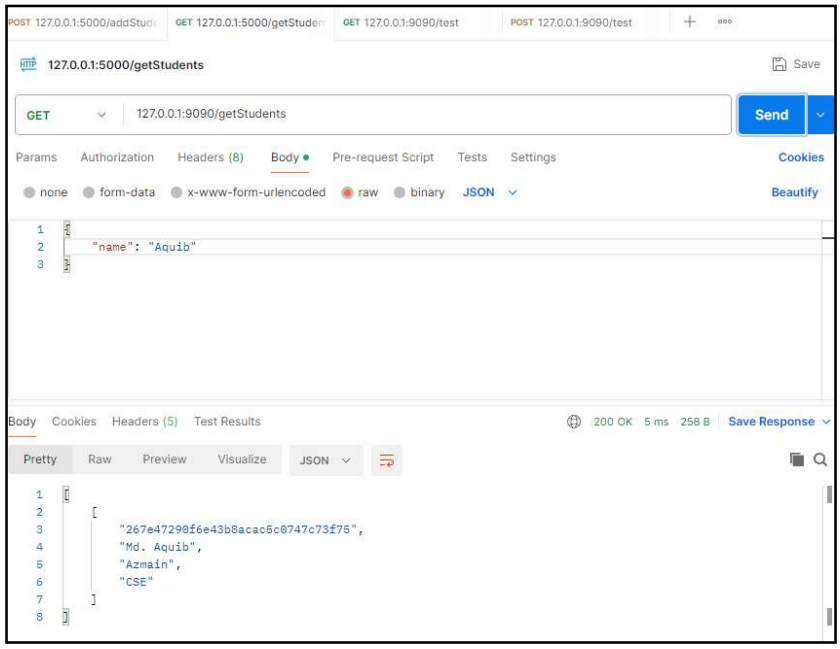
APIs of Feature - 01

APIs of Feature - 02

Instruction:

1. You have to develop all the REST APIs/Endpoints of two features (which interfaces you have submitted in the Figma assignment) of your project using your preferred backend framework. Database must be connected.
2. Each API description will include:
   - Endpoint URL (e.g., https://api.example.com/users)
   - HTTP Method (GET, POST, PUT, DELETE, etc.)
   - Headers (like Content-Type or Authorization)
   - Body/Parameters (data to send with request)
3. This is an individual submission. The developed APIs can not be duplicated among group members.
4. Add a code snippet for each API.
5. Run a backend server on a specific port. The port number should be the **last four digits of your student id**.
6. Test your developed API in Postman. Add a screenshot for each API.
7. For example:

```python
@app.route('/getStudents', methods=['GET'])
def getStudents():
    c = sqlite3.connect("student.db").cursor()
    c.execute("SELECT * FROM STUDENTS")
    data = c.fetchall()
    return data
```



- Endpoint URL: 127.0.0.1:9090/getStudetns
- HTTP Method: Get
- Headers: None
- Body: {“name” : “Aquib”}
